OPTIONAL TANDEM LOAD ROLLER & BRAKE ASSEMBLY	14 - 15

DELIVERY INSPECTION

Visually inspect hand pallet truck frame components and hydraulic unit for damage during shipment by carrier. If damage is evident, notify delivering carrier immediately and file necessary claims. Test the hand pallet truck pump for operation. If the hydraulic pump does not respond to movement of the handle, an air lock may have developed during shipping. To remedy this, pull and hold the release lever then operate the pump several times. If the pump still fails to respond, see the trouble shooting guide on page 5.

SAFETY SHOES

Always wear safety shoes when working with hand pallet trucks.

PROTECTIVE GLASSES

When assembling or dismantling a hand pallet truck, protective glasses must be worn to avoid personal injury.

OPERATOR'S RESPONSIBILITY

While operating a hand pallet truck always wear safety equipment and operate in a responsible manner to ensure a safe work area.

SAFETY PROCEDURES

- → Never overload your hand pallet truck. Stay within rated capacity.
- → Distribute the load evenly on the forks. Do not concentrate loads at one point or load one fork more than the other.
- → Never put your feet, hands or any other body part under the frame assembly.
- → Do not allow your hand pallet truck to drop from one level to another. Even a drop of 1" (25mm) more than doubles the effective load momentarily and results in a "Shock" which can bend or break components.
- → Always ensure load is stable before moving to eliminate opportunity for load shift.
- \rightarrow When not in use, forks should be fully lowered to avoid injury.

OPERATING INSTRUCTIONS

- → To raise load, push down on finger tip control. Pump handle to raise load from floor.
- → To lower load, pull up on finger tip control.

→ For free handle movement, place finger tip control in neutral position.

NOTE:

The neutral position disengages the pump from the lifting mechanism. This frees the handle, which makes pulling loads much easier. Also the pump is not being subjected to shock pressures while the truck is in motion.

MAINTENANCE

Lubrication

All pivot points are equipped with permanently lubricated bushings and bearings. To increase bearing life, it is recommended that a few drops of light machine oil be applied at each pivot point every 6 months.

The thrust plate is equipped with a grease zerk. This should be greased every 6 months.

Hydraulic system

Your hydraulic system is maintenance free. Do not add hydraulic oil unless there is, or has been a leak. Use Premium HVI hydraulic oil or equal. Other oils, fluids or solvents can damage your hydraulic system. If additional oil is required, position forks in lowered position. Remove oil level plug (PL-10267). Refill with hydraulic oil to plug hole level. Replace oil level plug.

Push bar linkage adjustment

If the forks do not raise evenly at the tips, or the roller levers begin to drag on the floor the following adjustment is necessary:

- Turn the hand pallet truck over so that the under side of the forks are accessible.
- Remove one split pin (PL-20269) with 3/16" punch.
- Remove pin (PL-20227) from bracket.
- Adjust eye bolts (PL-20226). Turn counter-clockwise to raise fork tips and clockwise to lower fork tips
- Replace pin (PL-20227) through eye bolt and replace spilt pin (PL-20269).
- When adjusted properly the forks should be 3" low height from ground level in the lowered position (LR2055 Model).

TROUBLE SHOOTING

Condition	Possible cause	Action
- Pump does not lift load	- An air lock in the hydraulic system	 Pull up on finger tip control and hold while pumping handle several times to bleed air from system.
 Lifting, neutral, and lowering does not function properly 	 Chain anchor adjustment required 	 Turn nut (PL-10271) on chain anchor clockwise until pumping action while in neutral does not raise forks.
 Forks raise and sink with pump action 	 Dirt or foreign particle caught in cone valve seat 	 Pull up on finger tip control and hold while pumping handle several times.
 Pump does not lift load to complete raised height 	- Pump is low on oil due to oil leak.	 Refer to procedure for adding hydraulic oil in maintenance section.
 Forks are not lowering all the way 	- Push bars need adjustment	 Refer to push bar linkage adjustment in the maintenance section.

HYDRAULIC PUMP CHANGE PROCEDURE (Model LR2055)

Tools:

- 1) Hammer
- 2) Flat head screw driver
- 3) 1/4" straight shank punch
- 4) Snap Ring pliers (Gray No. B128)
- 5) 3mm straight shank punch
- 6) Retaining ring pliers (Gray No. B108)
- 7) Retaining ring pliers (Gray No. B109)
- 8) 2" x 4" wood block approx. 4" longer than truck width

Removal of pump:

- 1) Pump-up pallet truck (unloaded) and remove snap ring (# PL20232) (tool #4).
- Place (tool #8) under forks at bulkhead; lower truck fully and remove split pins (PL10205) (tool #1 & #5) and remove thrust plate shoulder pins (PL20207).
- 3) Tilt pump handle forward and roll out.
- 4) Place pump assembly on work platform; remove (1) hub cap (# PL10236c)(tools #1, #2).
- 5) Knock out 1/4" dia. spring pin (# PL20242) (tools #1, #3).
- 6) Remove snap ring (# PL10237) (tool #6) from axle; disassemble and remove wheel assembly from pump.
- 7) Remove snap ring (# PL10235) (tool #7) from cylinder; disassemble and remove washer, thrust plate, bearing and pump collar.

Notes:

- A) Clean thrust plate before reinstalling a new pump.
- B) Grease the hole in the center of the thrust plate.
- C) Grease the ball socket before installing ball (PL10244).

IF THE PUMP DOES NOT LIFT NORMALLY PULL UP ON CONTROL LEVER AND HOLD WHILE PUMPING HANDLE SEVERAL TIMES.

THEN SET CONTROL LEVER TO PUMP POSITION AND PUMP HANDLE NORMALLY TO LIFT LOAD.

HAND PALLET TRUCK WARRANTY

Lift-Rite Inc. will guarantee this product against material or manufacturing defects provided the truck has not been abused and is used under normal conditions*. Lift-Rite Inc. will provide replacement components for those deemed defective by Lift-Rite Inc. under the terms listed below for the following models:

Models LR2055, L50M, L50M-4WAY, L50MU, L50MU-4way

The complete hydraulic pump and handle assembly is covered for (2) years. The chassis and associated components are covered for (12) months. Wearable components such as wheels, rollers, and bushings are covered for (6) months.

Models L60, L80, L100, Freezer Special models

All parts and components are covered for a (6) month period.

All warranty periods begin as of date of purchase. This warranty does not include labor or miscellaneous costs involved in the replacement of any components determined to be defective.

In order to claim for warranty, you must supply the truck serial number, as well as date of purchase. *Any truck used under adverse conditions, such as fish, meat or poultry processing plants, tanneries, freezer applications, or any other application where the unit is operating in water or subjected to fluid or chemicals, is *NOT* covered under any warranty. A freezer special truck prevents the frame and components from rusting out prematurely. The hydraulic pump, all bearings, as well as bushings are still subject to condensation and therefore premature failure.

Bent, twisted or misaligned forks are clear signs of abuse and are not covered under warranty.
